

Expandable 4K Video Over IP Network

Vy-Net2 Features and Benefits

Connectivity That Grows With You

Vy-Net2 is a video over IP network solution that connects video sources to end-point destinations, using minimal hardware. The system uses Ethernet infrastructure.

Vy-Net2 generates uncompressed video with zero latency. It deploys quickly, integrates smoothly, and is ready to expand when future needs change.

An installation can be in a switching system (one encoder to one, many or all end points via multicast) or as a simple point to point streaming device/extender via Cat6a/Cat7 cabling.

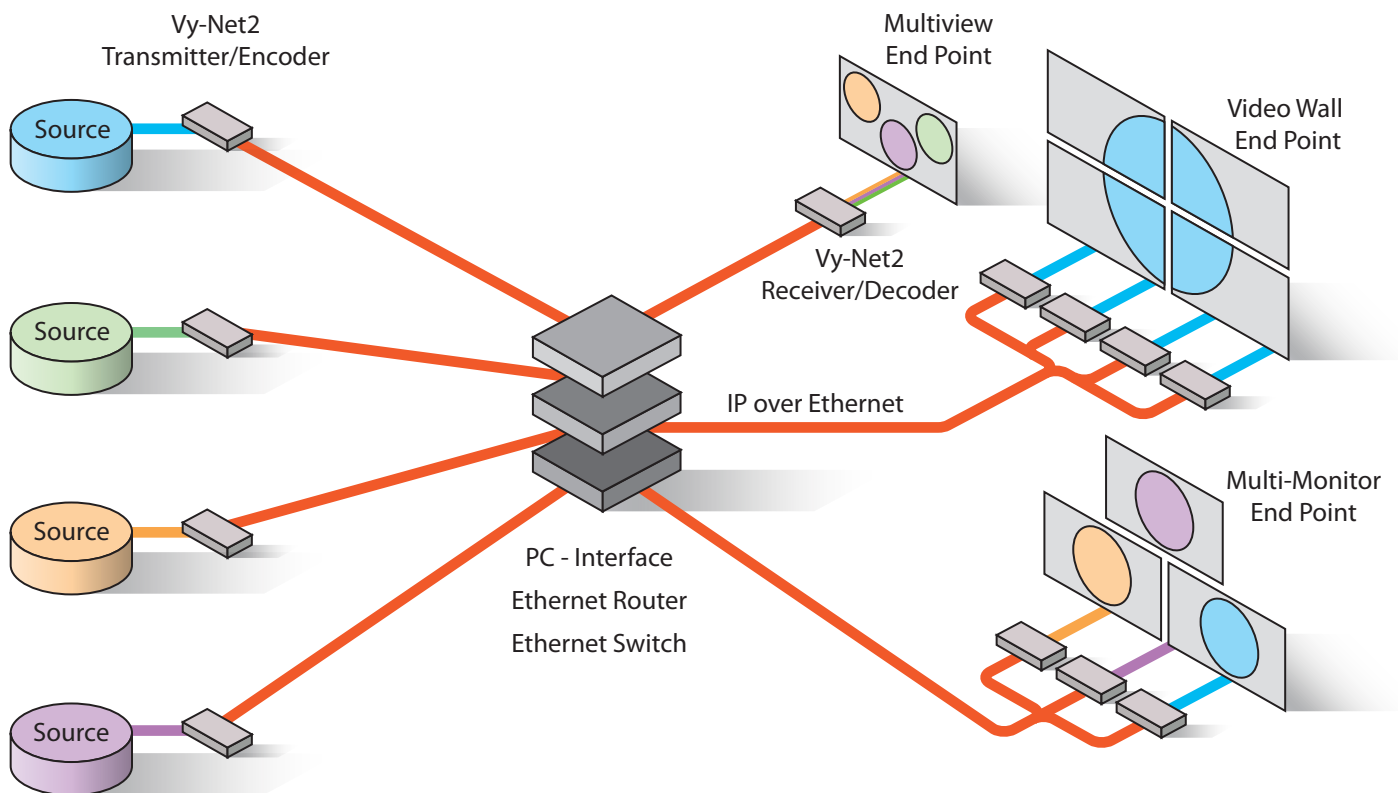

Simple Interface, Powerful Features

The Vy-Net2 web-based interface helps with initial setup, and controls the daily use of Vy-Net2 devices. The interface routes sources to monitors, up to 4K@60 fps video. The interface also allows naming of sources and monitors, previews active video signals, has a library of icons for customization, and

offers resizing/repositioning of picture-in-picture or multiview layouts. Audio and KVM functions are also available. The interface operates on any device running Chrome browser with access to the Vy-Net2 network.

Vy-Net2 units are powered by the included power supply. Other requirements include a Wi-Fi router, recommended Cat6a/Cat7 cable, and a 10Gb network switch.

Key benefits of video over IP.

- Infinitely scalable. Add/remove system components with ease.
- Unlike traditional matrix switches, the distribution core is not centralised.
- Longer cable lengths are allowed.
- Ratio of inputs to outputs is not a barrier.
- Communications can be merged with data (subtitles, closed captions, time codes).

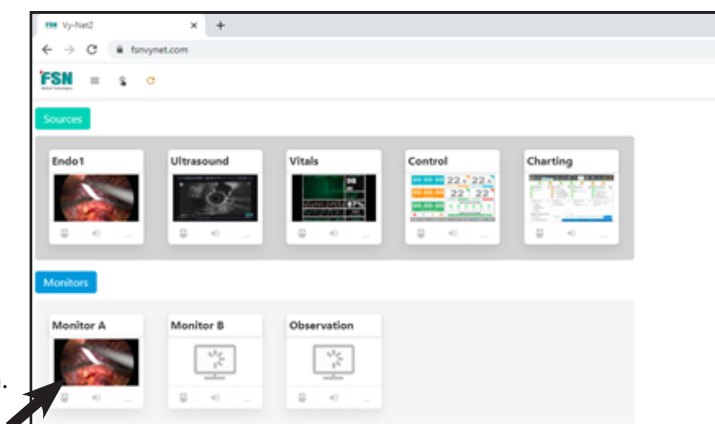

Key benefits of The Vy-Net2 solution.

- 3840 x 2160 @ 60Hz.
- Web-based user interface.
- Signal preview.
- Picture-in-picture or multiview layouts.
- Competitively priced.
